

LLM Apps

LangChain: Connect with fastAPI

Problem

- We want to connect an LLM RAG Application with a fastAPI API.

Solution

- We use the FastAPI module of LangChain to create the API.
- We use uvicorn to create the server.

Process

- We create the RAG application.
- We use the FastAPI module to create the app.
- We create the endpoint.
- We create the local server with uvicorn.
- Alternative if you do not use Jupyter Notebook.

Other

- For more info, see [LangChain Documentation](#).
