LLM Apps
Basic App: Advanced Output Parser

Problem

- We want to test an Output Parser that is capable of:
  - Using other types of inputs besides strings.
  - Validating the output format.

Solution

- We will use PydanticOutputParser.

Process

- Define the output structure we want.

- Use field_validators to validate the output format.

- Create the parser.

- Create the prompt template.

- Determine the user input.

- Apply the parser to obtain the desired output structure.
